

Repository Audit Worksheet

Introduction to Open Source Software — Week 4 · Case 2 — Repo Audit Workshop

Repository: facebook/react Date: 4.10.2026 Group members: Jasurbek, Fayozxon, Muslimbek, Shahriyor

Rule: no claim without evidence.
Evidence = what you saw + where you saw it + link.

Category	Score (0-2)	Evidence (link, number, data)	Observation	Concern	Recommendation
• README	2	README.md on main page	Explains UI core concepts, quick start, links to docs and contributing	Most detailed guides are external on react.dev	Add interactive sandbox links directly to README
• Documentation	2	README.md, CONTRIBUTING.md, CODE_OF_CONDUCT.md, react.dev	Comprehensive documentation and interactive tutorials for beginners	Core architecture guides are split across package folders	Add a documentation index/map to the repository root
• License	2	LICENSE file in root	MIT License — permissive for commercial and private use	None	Add license badge at top of README
• CONTRIBUTING	2	CONTRIBUTING.md; PR & local build guides	Clear guidelines on setup, testing, formatting and PR submission	Building React core requires setup for monorepo structure	Add a "Your First PR" section for non-core docs tasks
• Code of Conduct	2	CODE_OF_CONDUCT.md, Meta CoC contact email	Standard Meta Open Source code of conduct with enforcement contacts	Generic corporate policy without specific SLA	Specify estimated response time for policy reports
• Issues	1	Issues tab: 600+ open issues, bot triage active	High activity, bot tags bugs and feature requests	High volume of support questions mixed with actual bug reports	Enforce stricter issue templates requiring minimal repro
• Pull Requests	2	PRs tab: ~200 open, daily merges by core team	Maintainers are highly active, fast feedback on valid PRs	Strict CI pipeline can delay PR completion for external contributors	Auto-assign reviewers based on changed package subfolders
• Releases	2	130+ releases, clear SemVer tagging	Frequent releases, experimental and canary builds published	Changelogs are long and technical	Publish monthly release summaries in GitHub Discussions
• Tests	2	fixtures/ and packages/*/src/tests	Extensive test suite powered by Jest covering all render cases	Code coverage stats not immediately visible on landing page	Add a code coverage badge to README
• CI/CD	2	.github/workflows, CircleCI integration	Automated testing, linting, and bundle size checks on every PR	None	Add a build status badge to top of README
• Structure	2	packages/ folder (react, react-dom, react-reconciler)	Clean monorepo separation between core, renderers, and tooling	Complex dependency graph between packages for newcomers	Add an architecture diagram to README
• Community & Maintenance	2	1,600+ contributors, frequent commits	Huge active ecosystem, daily commits from Meta & community	Major roadmap decisions driven mostly by core Meta engineers	Tag more "good first issue" tickets for community members

TOTAL / 24: 23

Strongest aspect
High active maintenance and extensive test suite

Weakest aspect
600+ open issues, many support requests mixed in

Most important evidence
Packages structure and automated CI test workflows

Biggest risk
Monorepo complexity delaying beginner contributions

Top recommendation
Add an architecture diagram and "Your first PR" guide

Would you consider contributing? Why?
Yes: active maintainers and clear CONTRIBUTING.md guidelines
